

NEW FUEL

BIODIESEL B8

DEAR FRIENDS,

Thank you for the trust you have placed in us by using our biodiesel fuel B8.

You are already familiar with the formula for this fuel:
BIODIESEL B8 = 8% diesel of vegetable origin +92% diesel of fossil origin.

The diesel of vegetable origin is produced in the Refinery of Makpetrol, in compliance with the EN 14214 standard. The second component is Euro Diesel that meets the standard EN 590 and EURO IV norms for gas emissions from vehicles. We are convinced that the additional advantages of the vegetable component have been proven also in practice – particularly one of the most important - better engine lubrication.

BIODIESEL B8

БИО ДИЗЕЛ  **БИО ДИЗЕЛ**

New fuel **BIODIESEL B8**

The formula is the same, apart from the fact that fuel with sulfur concentration lower than 10 mg/kg is applied as fossil diesel.

The decreased sulfur quantity in Biodiesel B8 extends the shelf life of the catalyst in modern diesel vehicles. Due to the absence of sulfonic acid which is formed in the motor oil during the operation of the engine, the engine is protected against corrosion, and the lubricating motor oil lasts longer.

Also the emissions of the sulfuric compounds which pollute the environment, the soil and the waters are decreased.

The capacity of the diesel of vegetable origin to improve the lubrication ability of the fuel injection systems in diesel engines, is even more emphasized in this blend.

An optimal blend of fuels with accentuated environmental characteristics has been achieved with the new Biodiesel B8 fuel.

With these properties for the first time the fuels and the vehicles are becoming friends of the modern man and his environment.

These fuels are a privilege of the highly developed countries with strong awareness for the needs of the buyers and concern for the environment.

“Makpetrol”, among the first companies in Europe, once again proves its contemporaneousness and responsibility by introducing the new Biodiesel B8 fuel.

Biodiesel B8 - from now on available only at the petrol stations of Makpetrol.
